Education

Simon Fraser University

Bachelor of Applied Science - Computer Engineering (BAS)

Sep 2022 – Dec 2026

Burnaby, B.C. Canada

Technical Experience

Software Engineer

TELUS

May 2025 – Dec 2025

Vancouver, B.C. Canada

- Increased team efficiency by **developing a Python-based CLI tool** using the **Looker SDK**, automating repetitive reporting tasks and leading to time saved.
- Extended the CLI tool's functionality to export Looker data as **JSON** and upload it to a **Google Cloud Storage bucket**, enabling seamless data backup and creating a safer environment.
- Scheduled a **cloudfunction** to **automatically** back up client data daily. The **Python** function was scheduled with **Terraform**. This ensured secure and reliable protection of client data.
- Improved team collaboration by authoring clear documentation on **Git workflows**, including **releases**, **tags**, and **pull requests**, leading to an organized standard in the teams workflow.

Firmware Developer

Robot Soccer Club - Simon Fraser University

Sep 2022 – Present

Burnaby, B.C. Canada

- Developed and maintained embedded firmware in **C** for the soccer-playing robot's control systems, powered by an **ARM-based ATSAME70Q21** microcontroller.
- Implemented and configured a **GitLab CI/CD pipeline** to automate building and testing of the codebase, improving deployment reliability and efficiency.
- Wrote modular drivers and test code for various components, including the **sensor board** and dribbler (**DC motor**), enhancing system integration and real-time responsiveness.

Projects

AI Fitness App | *Personal* | [Code](#)

Jan 2025 – Present

- Creating a user-friendly mobile interface using **React Native**, improving accessibility and usability for end users across both Android and iOS platforms.
- Training a **machine learning model** to analyze and interpret exercise movements, enabling personalized feedback and form correction.
- Building a scalable and efficient backend using **FastAPI**, supporting seamless communication between the mobile app and machine learning components.

PhishNet.AI | *AI and Machine Learning Hackathon* | [Code](#) | [Demo](#)

July 2025

- Trained a **machine learning model** to **detect phishing emails** with high accuracy by using an **open-source dataset**, enabling automated classification of malicious messages.
- Implemented a **Support Vector Classifier** using **scikit-learn** and applied **TF-IDF vectorization** to convert email text into numerical features; tracked and evaluated model performance using **Pandas** to iteratively improve classification accuracy.
- Built a functional web application using **Flask** and **JavaScript**, allowing users to input messages and receive real-time phishing detection results, improving accessibility to email threat analysis tools.

Reminiscence Therapy App | *Software Engineering, SFU* | [Code](#) | [Demo](#) | [Info](#)

Sep 2024 – Dec 2024

- Designed and developed** an **Android** app using **Java** and **Android Studio** that supports people with dementia (PWD) and their caregivers through reminiscence therapy, aiming to enhance the quality of life and cognitive engagement for users. Providing code that is up to **Software Engineering** standards.
- Authenticating users with a sign up/log in page utilizing **Firebase Authentication**. User data is stored securely using **Firestore Realtime Database**.
- Ensured seamless collaboration and code integration, resulting in efficient version control, by utilizing **Git** and **GitLab** to manage the project repository and coordinate contributions among team members using unique branches

Technical Skills

Programming Languages: Python, JavaScript, C++, C, Java, HTML/CSS, VHDL

Frameworks/Technologies: Machine Learning, React, Flask, FastAPI, Expo, scikit-learn, pandas, GitHub, GitLab

Tools/Environments: VS Code, Eclipse, Android Studio, Arduino IDE, Linux, Ubuntu, Mac OS, Windows, Git
